Need a solution for php parallel processing.

Script will run on server side.

No threading allowed, no pthreads or any extra libraries.

This script is just an example, made with 3 loops.
I need a solution for running these 3 loop at the same time.

```php
for($i=0; $i < 3; $i++) {
    sleep(1);
    echo "name: " . $i . "  started at:" . date('h:i:s') . "<br>";
}

echo "<hr>";

for($i=0; $i < 3; $i++) {
    sleep(1);
    echo "day: " . $i . "  started at:" . date('h:i:s') . "<br>";
}

echo "<hr>";

for($i=0; $i < 3; $i++) {
    sleep(1);
    echo "week: " . $i . "  started at:" . date('h:i:s') . "<br>";
}
```

name: 0 started at:12:44:14
name: 1 started at:12:44:15
name: 2 started at:12:44:16
---
day: 0 started at:12:44:17
day: 1 started at:12:44:18
day: 2 started at:12:44:19
---
week: 0 started at:12:44:20
week: 1 started at:12:44:21
week: 2 started at:12:44:22
